

## **AMITECH GERMANY OPTIMISTIC FOR ITALIAN HYDROPOWER BUSINESS**

The sales of FLOWTITE GRP pipes to Italian hydropower projects has been developed well during the last two years. During this time, AMITECH Germany has delivered FLOWTITE GRP pipes for two penstocks in diameters DN 900 up to DN 1800 with nominal pressures between 6 and 20 bar. Both plants are located in northern Italy in the Triveneto region and the one of the penstocks with a diameter of 1,800mm is about 4,000m in length.

Currently, another 5 hydropower plants are under construction and some more with pipelines up to 3,000mm and pressures above 20bar are scheduled in next future. Due to the outstanding product properties of FLOWTITE GRP pipes, the laying length of 12m and the excellent technical support before, during and after pipe installation, AMITECH Germany is convinced to extend the business with hydropower projects in Italy also in near future.
